

What Do Scientists Do All Day?

Draw yourself as a scientist!

What would be your job title? What clothes would you wear? Where would you work? Include some special equipment: maybe a microscope, a computer, or something you invented!

If you're stuck for ideas, take a look at the scientists at the bottom of the page. See what their job is and what equipment they use to do it.

My name is

I am a

ASTRONOMER

I use the telescope to study the planets, stars and galaxies.

AEROSPACE ENGINEER

I design aircraft using models and diagrams.

SURVEYOR

I measure spaces with an electronic tape measure.

CHEMISTRY PROFESSOR

I study and teach how chemicals react with each other.

What Do Scientists Do All Day?

Even scientists get in a muddle sometimes!
The below jobs, descriptions and pictures have been mixed up.
Can you draw lines joining the ones that go together?

JOB

DESCRIPTION

PICTURE

I am an
OCEANOGRAPHER

Robots rule! I design robots. I draw them in 3-D on a computer, so I can see what the robot will look like from all sides.

I am a
DOCTOR

I study oceans, from the frozen Arctic to warm tropical seas. I look at everything from waves to the shape of the seabed.

I am a
PILOT ASTRONAUT

When you don't feel well, I find out what's wrong. Then I work out how to make you better and decide if you need medicine.

I am a
ROBOTICS ENGINEER

Each astronaut has a different job. I sit in the driving seat and fly the rocket into space. I keep in touch with mission control.
